1. This communication is in response to applicants response filed on September 9, 2004.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 27 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ito et al. (5,581,180).

As to claim 1, Ito discloses a plurality of magnets 3 forming a magnetic circuit that a continuous magnetic flux flows between the magnets; at least one sensor 4; an object 2 in the magnetic circuit between the magnets and the sensor being stationary while said object moves (Note e.g. fig. 9).

As to claim 27, magnetic flux passes through the object from one magnet to another (Fig. 9).

Art Unit: 2862

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 27 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Cotton et al. (6,320,375).

As to claim 1, Cotton discloses a plurality of magnets 18 forming a magnetic circuit that a continuous magnetic flux flows between the magnets; at least one sensor 16; an object 14 in the magnetic circuit between two magnets and the sensor being stationary while said object moves (Note figs. 1-2).

As to claim 27, magnetic flux passes through the object from one magnet to another (Figs. 1-2).

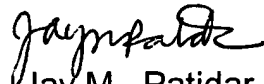

4. Claims 11-14,28 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

5. Applicant's arguments with respect to claims 1 and 27 have been considered but are moot in view of the new ground(s) of rejection.
